FRACTIONAL HYBRID LASER *halo* and regenerative combined protocols

TUTOR | MD. Franco Perego | Plastic Surgeon and Laser Specialist

halo first fractional hybrid laser for ablative and sub-ablative skin treatment : non invasive full-face resurfacing and combined Rigenera-HBW technology protocols.

The fractional hybrid laser technology by SCITON HALO releases ablative and sub-ablative wavelenghts in a single pass. One treatment to obtain a controlled ablation of the epidermis and both superficial and deep dermal reshaping. The immediate effect is comparable to a sun exposure erythema with come back to the "make-up" in 24/48 hours.

The micrografts methodology with Rigenera technology is the proven and effective most innovative treatment for skin regeneration.

The combined and sequential action based on these two tecnologies achieves a new full-thickness concept of non-invasive anti-ageing treatment for face, neck, décolleté and hands.

Course structure

the course is structured by classroom sessions and live training in laser surgical room

Primary target

at the end of the course you will understand the principles of this unique hybrid laser technology and you will be trained on the methodics, discovering advantages, tips and tricks.

Secondary target

you will trained on an innovative regenerative skin methodics to be combined with laser and able to boost the results for the patient.

Pre-requisite

Medical Doctors

DATE

Friday 8th March 2019
